

Formal Announcement: Launch of Remedia SOS

FOR IMMEDIATE RELEASE

Newark, DE – 11/28/25 – RemediaSOS is a new, specialized partnership dedicated to delivering rapid-response environmental remediation services across the Bakken Formation and the greater Williston Basin. This new entity has been established to meet the growing demand for efficient, high-impact solutions that safeguard land, water, and operational continuity in one of North America’s most active energy-producing regions.

RemediaSOS will focus on addressing the full spectrum of environmental challenges associated with oil and gas production, including hydrocarbon releases, produced-water spills, facility contamination, and long-term soil and groundwater impacts. Leveraging advanced remediation science, field-ready technologies, and a highly trained response team, Remedia SOS aims to raise the standard for environmental performance in the upstream and midstream sectors.

With operations centered in the Bakken Formation and the Williston Basin area, RemediaSOS is built to provide 24/7 emergency response, onsite environmental assessment, and turnkey remediation programs tailored to the demands of high-volume energy operations. The division integrates Remedia’s proven methodologies with new deployment capabilities designed specifically for remote, high-production environments.

The creation of RemediaSOS marks a strategic expansion for Remedia International and Strategic Oilfield Solutions as it strengthens its position as preferred environmental partners for the oil and gas sector. The company anticipates immediate engagement with regional producers and service partners, with additional capacity scaling throughout 2026.
